

Open workflow for explainable seismic-damage and fragility assessment of RC frame archetypes

Seven stages, from open ground-motion and site data to a district-scale scenario field for the Istanbul metropolitan area

Depiction: the seven methodological stages of this study, with the principal software of each stage; arrows give the order of execution. Software used for producing graph: Python 3.11.5 with Matplotlib 3.9.3 (pyplot, patches, path), NumPy 2.4.6, SciPy 1.17.1, scikit-learn 1.6.0 and the Python standard-library module textwrap.
